KORE Wireless Broadband Solution

Cost-effective connectivity for business-critical applications

As new business applications, visitor connectivity, and connected devices take up more of your bandwidth, critical functions can slow to a crawl. And that’s not good for business.

With a bundled solution that includes KORE 5G broadband connectivity and a 5G-enabled router, KORE can deliver up to 100Mbps download speeds and set the foundation to benefit from future network enhancements.

For areas not yet eligible for 5G coverage, we also have plans that deliver up to 12Mbps on a 4G LTE network. Take advantage of faster speeds today and get ready for future technologies without a hardware overhaul.

Wireless broadband plans from KORE are based on connection speed, not on the amount of data you use, so there are no overage charges. Whether you need a lower speed to support a few devices or top speed to support multiple apps and devices, your bill is predictable from month to month.

Benefits

- High usage plans with no overage fees
- Fast, highly reliable connections for business-critical applications
- Network availability in the event of congestion or failure
Choose how to use KORE Wireless Broadband

**Primary connection.** KORE Wireless Broadband provides a cost-effective, rapidly deployable connection to your branch or remote office where lack of service or special construction costs limits options.

**New technologies.** Using KORE Wireless Broadband as a dedicated connection for new applications enables adoption of new technologies like 5G that can help innovate without adding unnecessary congestion to your wireline network.

**Network augmentation.** Establish an active-active network with business-essential applications like timekeeping and point of sale riding the wireless network, and high-usage applications like public Wi-Fi and streaming services riding a wireline connection.

**“Always-on” failover.** KORE Wireless Broadband offers a highly reliable and diverse internet option that can serve day-to-day data needs and function as a primary connection if a secondary connection fails. In the case of a wireline outage, switch connections to the Wireless Broadband.

**Why KORE?**

KORE is a pioneering leader and trusted advisor that helps deliver transformative business performance from IoT solutions. We help customer organizations of all sizes navigate the complexities of IoT and improve execution, so they can focus on operational and business results. Our IoT expertise and experience, global reach, independence, and deployment agility accelerate and materially improve our customers’ return on their IoT investments.

**Deploy**
Getting started with IoT is simple and streamlined with KORE as your expert partner.

**Manage**
With connectivity, API integrations, and platforms, KORE end-to-end solutions support your operations.

**Scale**
KORE is your trusted advisor to help you scale your IoT projects intelligently.

KORE provides a wireless data solution designed with your essential applications and budget in mind. Get the connectivity boost you need to handle today’s digital business. **Contact us to find out more.**
